Dental Mouth Prop Adult, Black

Common Uses:

Mouth props are routinely used in dentistry to improve the quality of dental care and the comfort and safety of the patient.

Common Properties:

- Constructed of silicone or latex
- Ridges minimize slippage during procedures

Variations:

- Adult
- Pediatric
- With Chain

Function:

Dental mouth props are in common use to prop the patients jaws apart to permit the dentist or physician to perform the required operation.

Did you know?

Mouth props are simple but effective safety devices used by many dentists. Sometimes referred to as a bite block, the mouth prop is designed to help keep the mouth open wide enough for the dentist to perform whatever type of dental procedure the patient requires.
