Scissor Iris Curved, S/S, 4 1/2in

Common Uses:

This scissor was originally designed for ophthalmic procedures, intended for treating the delicate and soft tissues around the eyes.

Properties:

- Sharp, fine tips
- Curved Blades

Variations:

- Straight blades
- Tungsten carbide blades
- Super cut (serrated) blades

Function:

Iris scissors are sharp, fine, and robustly hard. These characteristics make it a perfect tool for the dissection of delicate tissues. The design of the scissor makes it finger-friendly.

Did you know?

The Iris Scissor is the most commonly used scissor in eye surgery
